

TECHNOLOGY AREA TEMPLATE

DEFINITION

<i>Name</i>	Web Based
<i>Description</i>	A web-based architecture means that the information system's functionality can be provided to users regardless of geographical location. Information can be presented in web browsers, such as html, xml, jsp, etc..
<i>Rationale</i>	The main rationale of utilizing browser based development lie in the flexibility in the deployment of applications and the volume of customers reached.
<i>Benefits</i>	<ul style="list-style-type: none"> • Reduced the need for updating client software of PCs • Any web-enabled device can access the application • The presentation of the web application is platform independent • Information may be seen in real-time anywhere in the world • May reduce training cost • The application may be configured to manage large volumes of workload without re-writing the presentation layers • Management of information is no longer bound by geographical location • The time people can access information is no longer bound by normal business hours
